This book had its nucleus in some lectures given by one of us (J. O'M. B. ) in a course on electrochemistry to students of energy conversion at the University of Pennsylvania. It was there that he met a number of people trained in chemistry, physics, biology, metallurgy, and materials science, all of whom wanted to know something about electrochemistry. The concept of writing a book about electrochemistry which could be understood by people with very varied backgrounds was thereby engendered. The lectures were recorded and written up by Dr. Klaus Muller as a 293-page manuscript. At a later stage, A. K. N. R. joined the effort; it was decided to make a fresh start and to

write a much more comprehensive text. Of methods for direct energy conversion, the electrochemical one is the most advanced and seems the most likely to become of considerable practical importance. Thus, conversion to electrochemically powered transportation systems appears to be an important step by means of which the difficulties of air pollution and the effects of an increasing concentration in the atmosphere of carbon dioxide may be met. Corrosion is recognized as having an electrochemical basis. The synthesis of nylon now contains an important electrochemical stage. Some central biological mechanisms have been shown to take place by means of electrochemical reactions. A number of American organizations have recently recommended greatly increased activity in training and research in electrochemistry at universities in the United States.

The main goal of this volume is to analyse human development through the life cycle. Using examples of life skills and exercise practice, topics related to how to organise life skills programs for children, youth, and adults and how to assume healthy life styles by doing regular exercise are discussed. How to promote positive development across the life cycle is also addressed by numerous authors.

**THE DEFINITIVE, COMPREHENSIVE, OFFICIAL GUIDE TO XCELSIUS 2008 DASHBOARDS** Using Xcelsius, you can create powerful, interactive dashboards, gather data from spreadsheets or databases, and deliver knowledge that can be instantly understood and acted upon. Now there's a definitive, authoritative guide to

making the most of Xcelsius 2008, the newest version of this breakthrough product. Loren Abdulezer, editor-in-chief of Xcelsius Journal, shares insider's knowledge that goes far beyond any other book or online help resource. Abdulezer introduces Xcelsius 2008, reviews its core concepts, and demonstrates the wide range of dashboards it can create. After you know what's possible, you'll go deep inside Xcelsius, gaining hands-on experience with every feature you need to master. You'll learn how to quickly represent any data with charting components; use dials, gauges, and speedometers; incorporate multiple layers in your dashboards and visualizations; use Xcelsius to perform more useful analyses and manage more interactively; work with maps, demographics, and segmented data; create "smart data" and alerts; and much more. Abdulezer offers tips and tricks you won't find anywhere else. You'll learn how to work with data that isn't rock-solid--and even how to create your own custom components that go beyond Xcelsius's built-in features. Whether you're a business intelligence or database professional, power user, developer, or consultant, this book will help you create superior Xcelsius dashboards--and make better decisions. **THE ONLY XCELSIUS 2008 DASHBOARDING BOOK YOU NEED** Use Xcelsius 2008 to get better answers, identify emerging trends and opportunities, and manage more effectively Learn hands-on, through step-by-step examples using real business data Discover tips and tricks proven in real-world environments Deliver dashboard content in whatever format works best: as HTML pages, PowerPoint presentations, PDF files, or Word

Jim Dine is one of America's best-known image-makers. This book, published to accompany the first major exhibition of Dine's work from the 1960s, reproduces a broad selection of his early mixed-media works, paintings and sculptures. Many of the works featured in this volume contain elements of the now-familiar themes of Dine's career: tools, robes, hearts, palettes and domestic interiors. Bringing together fascinating performance photographs with vivid full-color reproductions, the book is the first to explore the complex relationship between Dine's mixed-media works and his environments and theater pieces.

Development economics and policy are due for a redesign. In the past few decades, research from across the natural and social sciences has provided stunning insight into the way people think and make decisions. Whereas the first generation of development policy was based on the assumption that humans make decisions deliberately and independently, and on the basis of consistent and self-interested preferences, recent research shows that decision making rarely proceeds this way. People think automatically: when deciding, they usually

draw on what comes to mind effortlessly. People also think socially: social norms guide much of behavior, and many people prefer to cooperate as long as others are doing their share. And people think with mental models: what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories. The World Development Report 2015 offers a concrete look at how these insights apply to development policy. It shows how a richer view of human behavior can help achieve development goals in many areas, including early childhood development, household finance, productivity, health, and climate change. It also shows how a more subtle view of human behavior provides new tools for interventions. Making even minor adjustments to a decision-making context, designing interventions based on an understanding of social preferences, and exposing individuals to new experiences and ways of thinking may enable people to improve their lives. The Report opens exciting new avenues for development work. It shows that poverty is not simply a state of material deprivation, but also a tax ? on cognitive resources that affects the quality of decision making. It emphasizes that all humans, including experts and policy makers, are subject to psychological and social influences on thinking, and that development organizations could benefit from procedures to improve their own deliberations and decision making. It demonstrates the need for more

discovery, learning, and adaptation in policy design and implementation. The new approach to development economics has immense promise. Its scope of application is vast. This Report introduces an important new agenda for the development community.

Rinko Kawauchi has gained international recognition for her nuanced, lushly colored images that offer closely observed fragments of everyday life. In her latest work, she shifts her attention from the micro to the macro. The title, *Ametsuchi*, is comprised of two Japanese characters meaning heaven and earth, and is taken from the title of one of the oldest pangrams in Japanesea chant in which each character of the Japanese syllabary is used. Translated loosely as *Song of the Universe*, it offers a list that includes the heavens, earth, stars, and mountains. In *Ametsuchi*, Kawauchi brings together images of distant constellations and tiny figures lost within landscapes, as well as photographs of a traditional style of controlled-burn farming (*yakihata*) in which the cycles of cultivation and recovery span decades and generations. Punctuating the series are images of Buddhist rituals and other religious ceremoniesa suggestion of other means by which humankind has traditionally attempted to transcend time and memory. The series is her first to be fully realized with a medium-format, 4 x 5 camera, instead of the 2 ¼-inch format for which she has become best known.

And while her work has frequently touched on the ephemeral, often using tiny details as a point of access to the larger cycles of life, with this new body of work she purposely concentrates on the elemental and universal.

Pro Crystal Enterprise/BusinessObjects XI Programming shows you how to create customized solutions using the Business Objects/Crystal Enterprise object model. Here you'll see the object model utilized to create professional-quality tools like on-demand web services, report metadata extraction, scheduling, security, and user management. Author Carl Ganz explains in detail how to build advanced reporting solutions for Crystal Enterprise/Business Objects XI. He shows how to integrate CE/BO XI with .NET 2.0 and Visual Studio to create more flexible, tailored, and responsive reporting solutions than have previously been possible. In short, you'll surpass what you thought you could achieve, and learn to create almost any imaginable reporting solution that Business Objects XI can handle.
