Blindness and visual impairment impact significantly on an individual's physical and mental well-being. Loss of vision is a global health problem, with approximately 250 million of the world's population currently living with vision loss, of which 36 million are classified as blind. Visual impairment is more frequent in the elderly, with cataract and age-related macular degeneration (AMD) accounting for over 50% of cases globally. Oxidative stress has been strongly implicated in the pathogenesis of both conditions, and consequently the role of nutritional factors, in particular carotenoids and micronutrient antioxidants, have been investigated as possible preventative or therapeutic strategies. Dry eye syndrome (DES) is one of the most common ophthalmic conditions in the world. DES occurs where the eye does not produce enough tears and/or the tears evaporate too quickly leading to discomfort and varying degrees of visual disturbance. There has recently been a great deal of interest in the potential for oral or topical supplementation with essential fatty acids (EFAs),

specifically omega-3 and omega-6 fatty acids, as an adjunct to conventional treatments for DES. The objective of this Special Issue on 'Nutrition and Eye Health' is to publish papers describing the role of nutrition in maintaining eye health and the use of nutritional interventions to prevent or treat ocular disease. A particular (but not exclusive) emphasis will be on papers (reviews and/or clinical or experimental studies) relating to cataract, AMD and DES.

presented in the Introduction (Chapter 1). The focus of Chapter 1 is twofold: (1) to present the research foundations for the psychophysiological correlates of prenatal psychosocial adaptation and the seven prenatal personality dimensions with progress in labor and birth outcomes, and particularly (2) to present the theory underlying the seven dimensions of prenatal psychosocial adaptation, which are further analyzed in the following seven chapters. Chapters 2–8 present a content analysis of the interview responses to the seven significant prenatal personality dimensions that are predictive of pregnancy adap- tion, progress in labor, birth

outcomes, and postpartum maternal psychosocial adaptation, and they include: (1) Acceptance of Pregnancy, (2) Identification with a Motherhood Role, (3) Relationship with Mother, (4) Relationship with Husband, (5) Preparation for Labor, (6) (Prenatal) Fear of Pain, Helplessness, and Loss of Control in Labor, and (7) (Prenatal) Fear of Loss of Self-Esteem in Labor. There is no other comparable comprehensive, in-depth, prenatal personality research or empirical and content analysis of pregnancy-specific dimensions of maternal psychosocial adaptation to pregnancy.

This comprehensive, first-of-its kind title is an indispensable resource for pharmacists looking to learn or improve crucial patient assessment skills relevant to all pharmacy practice settings. Pharmacists' role as health care practitioners is evolving as they are taking a more active part in primary patient care -- helping patients manage their medications and diseases, providing patient education, and, in some jurisdictions, prescribing and adapting medications. To perform their day-to-day duties, pharmacists are best-served using a framework called the patient care process. This framework involves three steps: patient assessment; care plan development and implementation; and monitoring and follow up. Organized in four parts, this practical book begins with introductory chapters regarding the basics of patient assessment and the patient care process. Part II includes a detailed assessment of common symptoms encountered by pharmacists. Part III discusses assessment of patients with various chronic illnesses. Part IV addresses select specialized topics and assessment considerations. An invaluable contribution to the literature, *Patient Assessment in Clinical Pharmacy: A Comprehensive Guide* will be of great benefit to pharmacists, regardless of their practice setting, and to pharmacy students as well.

This book explores the narrative power of texts in creating communities. Through an investigation of genealogical, historical, and biographical texts, it retrieves the social history of the Muslim community in Gujarat, a region with one of the earliest records of Muslim presence in the Indian subcontinent. By reconstructing the literary, social, and historical world of Sufi preceptors, disciples, and descendants from the fifteenth to the seventeenth century, Jyoti Gulati Balachandran highlights the role of learned Muslim men in imparting a prominent regional and historical identity to Gujarat. The book reveals how distinct forms of community and association were created and shaped over time through architecture, shrine veneration, and most importantly, textual redefinition. *Narrative Past* demonstrates that Gujarat was not only an important hub of maritime Indian Ocean trade, but also an integral part of the historical and narrative processes that shaped medieval and early modern South Asia. Employing new and rarely used literary materials in Persian and Arabic, this book brings new life and vitality to the history of the region by integrating Gujarat's sultanate and Mughal past with the larger socio-cultural histories of Islamic South Asia.

Bioactive compounds play a central role in high-value product development in the chemical industry. Bioactive compounds have been identified from diverse sources and their therapeutic benefits, nutritional value and protective effects in human and animal healthcare have underpinned their application as pharmaceuticals and functional food ingredients. The orderly study of biologically active products and the exploration of potential biological activities of these secondary metabolites, including their clinical applications, standardization, quality control, mode of action and potential biomolecular interactions, has emerged as one of the most exciting developments in modern natural medicine. *Biotechnology of Bioactive Compounds* describes the current stage of knowledge on the production of bioactive compounds from microbial, algal and vegetable sources. In addition, the molecular approach for screening bioactive compounds is also discussed, as well as examples of applications of these compounds on human health. The first half of the book

comprises information on diverse sources of bioactive compounds, ranging from microorganisms and algae to plants and dietary foods. The second half of the book reviews synthetic approaches, as well as selected bioactivities and biotechnological and biomedical potential. The bioactive compounds profiled include compounds such as C-phycocyanins, glycosides, phytosterols and natural steroids. An overview of the usage of bioactive compounds as antioxidants and anti-inflammatory agents, anti-allergic compounds and in stem cell research is also presented, along with an overview of the medicinal applications of plant-derived compounds. *Biotechnology of Bioactive Compounds* will be an informative text for undergraduate and graduate students of bio-medicinal chemistry who are keen to explore the potential of bioactive natural products. It also provides useful information for scientists working in various research fields where natural products have a primary role.

This book serves as a reference text for regulatory, industry and academic statisticians and also a handy manual for entry level Statisticians. Additionally it aims to stimulate academic interest in the field of Nonclinical Statistics and promote this as an important discipline in its own right. This text brings together for the first time in a single volume a comprehensive survey of methods important to the nonclinical science areas within the pharmaceutical and biotechnology industries. Specifically the Discovery and Translational sciences, the Safety/Toxicology sciences, and the Chemistry, Manufacturing and Controls sciences. Drug discovery and development is a long and costly process. Most decisions in the drug development process are made with incomplete information. The data is rife with uncertainties and hence risky by nature. This is therefore the purview of Statistics. As such, this book aims to introduce readers to important statistical thinking and its application in these nonclinical areas. The chapters provide as appropriate, a scientific background to the topic, relevant regulatory guidance, current statistical practice, and further research directions.

Organized by region, this text provides the fundamentals of evaluation and examination techniques of the musculoskeletal system. Each region begins with step-by-step instructions for goniometry, manual muscle testing, muscle length, joint accessory motions and special orthopedic tests. Special discussions of posture and gait analysis are also included. New in this edition is a chapter on Assessment of Pain. The discussion on the Spine has been expanded to three chapters -- Cervical, Thoracolumbar Spine and Sacroiliac Joint. This book draws upon both musicology and cultural history to argue that French musical meanings and values from 1898 to 1914 are best explained not in terms of contemporary artistic movements but of the political culture. During these years, France was undergoing many subtle yet profound political changes. Nationalist leagues forged new modes of political activity, as Jane F. Fulcher details in this important study, and thus the whole playing field of political action was enlarged. Investigating this transitional period in light of several recent insights in the areas of French history, sociology, political anthropology, and literary theory, Fulcher shows how the new departures in cultural politics affected not only literature and the visual arts but also music. Having lost the battle of the Dreyfus affair (legally, at least), the nationalists set their sights on the art world, for they considered France's artistic achievements the ideal means for furthering their conception of "French identity." *French Cultural Politics and Music: From the Dreyfus Affair to the First World War* illustrates the ways in which the nationalists effectively targeted the music world for this purpose, employing critics, educational institutions, concert series, and lectures to disseminate their values by way of public and private discourses on French music. Fulcher then demonstrates how both the Republic and far Left responded to this challenge, using programs and institutions of their own to launch counterdiscourses on contemporary musical values. Perhaps most importantly, this book fully explores the widespread influence of this politicized musical culture on such composers as d'Indy, Charpentier, Magnard, Debussy, and Satie. By viewing this fertile cultural milieu of clashing sociopolitical convictions against the broader background of aesthetic rivalry and opposition, this work addresses the changing notions of "tradition" in music--and of modernism itself. As Fulcher points out, it was the traditionalist faction, not the Impressionist one, that

eventually triumphed in the French musical realm, as witnessed by their "defeat" of Stravinsky's Rite of Spring.
