No one wants to think about getting older. It's true. At any age, when things are moving along normally day to day and everyone seems fit and well, there seems no reason to think about future problems that your friends and relatives might (and probably will) come across as they age. In fact, it might even seem a little morbid to think such thoughts, or possibly even tempting fate? Yet there will come a time when you must raise these issues and, ideally, this should be before any problems arise. The Essential Family Guide to Caring for Older People is the ultimate source of information and help for families with care responsibilities. Deborah Stone draws on her extensive experience working in elder care to offer practical advice on every aspect of the field indepth. Topics range from how to get help immediately, legal information, care funding options, a guide to useful technology and advice on the main physical and mental health issues that affect older people. Plus guidance is given on dealing with social services and ensuring you choose the right care for your situations. Crucially, the book also offers help on how to cope as a carer with practical advice on juggling family, work and your caring responsibilities while looking after yourself.

This guide looks at Global Positioning Systems from the perspective of those who are having to deal with the effects of new technology on ship operation and management. The navigation community now has full uninterrupted access to

The weeks following the attacks of September 11, 2001, were traumatic for nearly every American, but for some, the answers they received from the media and the government to explain the horrific events was not satisfactory. Accusations of cover-ups, internal plots, and sabotage from within the ranks of the U.S. government were—and continue to be—not uncommon. But compelling evidence contrary to the accepted narrative has, for some skeptics, been lacking. This investigation into the events of that day reveals dark secrets about United States–sponsored terrorism. Taking highly complex technical and scientific information, and distilling it for the consumption of the lay person, this inquiry attempts to reveal the truth behind that infamous day.

From the Center for Strategic and International Studies comes a report on U.S. military use of satellites in space as a way to maintain "information superiority." They explore possible ways to encourage the building of satellite infrastructure by U.S. companies and examine the military's response to opponents' use of satellite imagery and other satellite information. They argue that current technology transfer restrictions are actually hurting the U.S. satellite companies, leading to a satellite gap. Annotation copyrighted by Book News, Inc., Portland, OR
