Most medical terminology texts present the roots on one page, body system on one page, and a list of related anatomical terms on the next. The result is students fail to make connections and end up approaching the course as a never-ending series of lists to be memorized. Acquiring Medical Language is language focused. It introduces students to roots with illustrations of body systems and surrounds that information with term blocks that include specific word roots, examples containing that root, and some interesting facts to make the information more memorable. This exposes students to all the relevant information (the root, its meaning, its use), so they see how it relates to the other roots in the context of the body system. Each chapter of AML also is structured around the S.O.A.P framework. S.O.A.P stands for the four general parts of a medical note: Subjective, Objective, Assessment and Plan. After introducing the student to the important roots and the medical terms relevant to the body system, the roots are presented using the SOAP note as an organizational framework. Terms are presented to students under the following learning objectives: S – Subjective – Patient History, Problems, Complaints O – Objective – Observation and Discovery A – Assessment – Diagnosis and Pathology P – Plan – Treatments and Therapies

Combining the Time-Tested A & P Approach with a New Contextual Approach, MEDICAL LANGUAGE FOR MODERN HEALTH CARE Promotes Active Learning Chapters in the textbook are organized by body system in accordance with an overall anatomy and physiology (A & P) approach. Lessons introduce and define terminology through the context of A & P, pathology, and clinical and diagnostic procedures/tests. The organization of the body systems into chapters is based on an "outside to inside" sequence that reflects a physician's differential diagnosis method used during an examination. To provide students with an authentic context, the medical specialty associated with each body area or system is introduced along with the anatomy and physiology. Students actually step into the role of an allied health professional associated with each specialty. Patient cases and documentation are used to illustrate the real-life application of medical terminology in modern health care: to care for and communicating with patients, and to interact with other members of the health care team. The A & P organizational approach, used in conjunction an authentic medical setting and patient cases, encourages student motivation and facilitates active, engaged learning. Each chapter is structured around a consistent and unique framework of pedagogic devices. No matter what the subject matter of a chapter, the structure enables students to develop a consistent learning strategy, making Medical Language for Modern Health Care a superior learning tool.
