"The book is aimed at narrowing the gap between industrial aspects of mud engineering and its academic basics. It also sums up the experience of handling unconventional and unforeseen problems related with well-bore instability with the right composition of mud to facilitate correct properties in drilling fluid design, and thus minimize/eliminate non-productive time. If the book is able to fulfil any / all of these objectives, then the purpose of writing the book is served. It aims to reach out to petroleum engineering students and those mud engineers who have just begun their career in oil field, with many questions wandering in their minds, and aims to

answer them in a manner that makes sense to their limited exposure with the least technical jargon but yet, effectively quench their thirst of inquisitiveness. For the professionals who aspire to climb the ladders of success to reach the corporate jungle, the book cautions them that what appears costly superficially need not be always costly and thus spend enough money to have a right team of professionals surrounding them and not the guys who will always agree to them for the fear of loss of their job."

If it can happen in Beverly Hills, it can happen anywhere. The Poisoning of an American High School is a feat of investigative reportage and the product of four years of research by award-winning journalist Joy Horowitz. Making lucid the tangled issues of public health, regulation, and the political power of industry, it tells a riveting tale ripped from newspaper headlines--a cancer cluster affecting graduates of one of America's most affluent schools, Beverly Hills High. The Poisoning of an American High School presents the behind-the-scenes saga of the 2003 landmark toxic tort suit, in which more than one thousand plaintiffs, with the sensational Erin Brockovich as their champion, claimed their illnesses could be traced to exposure to the

Drawn from research and interviews with Vietnam War veterans, the author relates the wartime experiences of the helicopter pilots and crews in the Tây Ninh-based Charlie Company of the First Cavalry Division's 229th Assault Helicopter Battalion from March-September 1970, including an account of a mid-air collision of two U.S. Army helicopters.

This book is a comprehensive study of the evolution of the component aspects of

drilling technology in Alberta, from the evolution of power sources and drill bit designs to the composition of drilling muds and the use of fishing tools. Included are explanations of the costs and risks of oil well drilling and of the larger issue of industrial technology -- how it evolves and under what conditions. The author draws extensively from original source material such as interviews, photographs, and appendices from both the Glenbow Archives and the Devon-Leduc Petroleum Hall of Fame and Interpretive Centre.

Outpirating the pirates with one of the most interesting men alive: Max Hardberger recounts his adventures repossessing ships and sneaking them out of lawless, third-world countries, often under threat of death or imprisonment. His journeys lead him from corrupt ports in the Caribbean to the ice-bound docks of Vladivostok. His adventures in rescuing ships pit him against a rogue's gallery of antagonists, including Haitian rebels, modern-day Caribbean pirates and Russian mobsters. • Capt. Max Hardberger uses every trick, tool and tactic at his disposal to right wrongs and out-pirate pirates in this action-packed expose of the seedy underworld of international shipping. As a professional ship extractor, he risks death and imprisonment in dangerous third-world ports to steal ships from modern buccaneers and corrupt governments and deliver them back to their rightful owners. In the course of his adventures, he's had to outwit resourceful crime families, subdue armed soldiers, and turn the tables on clever con artists. He's escaped imprisonment in Venezuela and

avoided death at the hands of the Russian mafia. Because Max shuns the use of force, the ingenious methods he must use to accomplish his missions are the stuff of legend he's employed a witch doctor in Haiti, tricked armed guards off a ship in Honduras, and rented a brothel in Mexico, all to thwart the designs of ship-thieves. Seized! is an intense, fast-paced window on the underbelly of ocean shipping, where all power comes from the barrel of a gun, and the only law is the law of survival. -- "Max Hardberger, maritime repo man extraordinaire ... Using a combination of ingenuity, stealth and good old-fashioned derring-do, he has made his name retaking vessels which have been hijacked or which, through local corruption, are impounded by authorities hungry for bribes." • -- Sunday Express • "With most people, the longer you spend talking to them, the more normal they appear. With Hardberger, the reverse applies. Just when you think you've heard it all, he comes up with something wilder ... Over the years, he's distracted crews with prostitutes and witch doctors, bribed officials to look the other way, conned Russian mobsters and hidden from naval radar by riding out thunderstorms at sea; he's even taken a 10,000-tonne freighter out of Haiti while the 2004 revolution was going on around him." • -- Guardian • "Required reading, fascinating. Maritime Repo Man Hardberger does it tough; his life is flown by the seat of his pants, or shipped, much like his profession ... This book delivers." • -- Paul Carter, bestselling author of Don't Tell Mum I Work On The Rigs and This Is Not A Drill • "In this heart-stopping account of his work recovering stolen (or otherwise illegally-seized)

ships from 'hellhole' ports, commercial captain Hardberger proves himself tough as a tank and articulate as a poet ... [He] has a seafarer's gift for atmospheric storytelling, layering details to create a sense of place, history, and foreboding ... Hardberger's escapades make undeniably fun reading." • -- Publishers Weekly • "One of the strengths of Hardberger's book is his prose, which is lucid, entertaining and dramatic." • -- Daniel Sekulich, author of *Terror on the Seas: True Tales of Modern Day Pirates*

From the author of the acclaimed bestseller *Holes*, winner of the Newbery Award and the National Book Award, comes a New York Times bestselling adventure about the impact we have—both good and bad—on the world we live in. Be careful. Your next step may be your last. Fifth grader Tamaya Dhilwaddi and seventh grader Marshall Walsh have been walking to and from Woodridge Academy together since elementary school. But their routine is disrupted when bully Chad Hilligas challenges Marshall to a fight. To avoid the conflict, Marshall takes a shortcut home through the off-limits woods. Tamaya, unaware of the reason for the detour, reluctantly follows. They soon get lost. And then they find trouble. Bigger trouble than anyone could ever have imagined. In the days and weeks that follow, the authorities and the U.S. Senate become involved, and what they uncover might affect the future of the world. "Sachar blends elements of mystery, suspense, and school-day life into a taut environmental cautionary tale."--Publishers Weekly

My son asked me to write the things I did while growing up. The two chapters I thought I could

write became forty-four chapters. My memories are happy moments, as I grew up during the Depression in a wonderful Christian home six miles south of Littlefield, Texas. The moment my Father saw me, he called me his Plains Angel. My Mother was a kind and thoughtful person with a precious disposition and always spoke with positive words. Living with my brothers and sisters was like having my best friends with me at all times. Life was great even with the sandstorms turning our daylight to darkness, planting black-eye peas instead of cotton because of little rainfall, gathering eggs from tall haystacks, hoeing cotton from dawn to dusk, and learning how to preserve fruits, vegetables, and meat for our winter food. My Father was a great farmer and helped provide electricity and a party-line telephone system to our rural community. He is known as Mr. REA (Rural Electrification Administration) in Littlefield, Texas. I researched my Littlefield School system in 1913 and found Mr. George W. Littlefield had donated land for a one-room school building. Ms. Willie Armstrong taught school in April, May, and June with a yearly salary of forty dollars. My dream to help children and fill their lives with sunshine came true the day I began my teaching career in Plainview, Texas. After writing about World War I, World War II, and the following wars, I have a better understanding what my two brothers and other family members must have endured. I am thankful my three wonderful sons – Terry, Dale, and Randy with their adventures at home, church, school, Scout trips, did not have to experience the pain of war. My life has been blessed with a wonderful husband, three great sons that are successful, a great daughter-in-law, and two precious grandchildren, Trevor and Lane. My joyful memories growing up on a Littlefield farm with my wonderful family gave me the foundation I needed for my life's adventures and accomplishment. Bonnie Faye James Gaston

This interdisciplinary book encompasses the fields of rock mechanics, structural geology and petroleum engineering to address a wide range of geomechanical problems that arise during the exploitation of oil and gas reservoirs. It considers key practical issues such as prediction of pore pressure, estimation of hydrocarbon column heights and fault seal potential, determination of optimally stable well trajectories, casing set points and mud weights, changes in reservoir performance during depletion, and production-induced faulting and subsidence. The book establishes the basic principles involved before introducing practical measurement and experimental techniques to improve recovery and reduce exploitation costs. It illustrates their successful application through case studies taken from oil and gas fields around the world. This book is a practical reference for geoscientists and engineers in the petroleum and geothermal industries, and for research scientists interested in stress measurements and their application to problems of faulting and fluid flow in the crust.

This course provides a non-technical overview of the phases, operations and terminology used on offshore drilling platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.
