Sarafino's goal in *Principles and Procedures for Modifying Behavior* is to create a clear and engaging instrument that describes ways to analyze one's own specific behaviors in terms of the factors that lead to and maintain them and ways to manage those factors to improve the behaviors. The text is based on research, theory, and experiences to explain and provide examples of the concepts and methods of self-management in a comprehensive text. It focuses on topics in applied behavior analysis, behavior modification, behavior therapy, and psychology of learning. Two general topics shaped this text: making the book relative to a variety of fields by describing applications in psychology, education, counseling, nursing, and physical therapy and different academic levels and preparation. Several important objectives guided the content and organization of the text which is designed to cover a large majority of tasks or concepts that the Behavior Analyst Certification Board ([www.bacb.com](http://www.bacb.com)) has identified as the field's essential content and should be mastered by all behavior analysts.

Longtime Myers collaborator Richard Straub provides an updated study guide for the new edition.

Following the text's content, Richard Straub offers a Chapter Overview and Chapter Review, which is divided by major section. Each group of fill-in-the-blank and short-answer questions is preceded by the relevant objective from the text. The Study Guide also includes three self-tests (one of which encourages students to think critically about the chapter's concepts), answers (with page references for the self-tests and explanations of why a choice is correct or incorrect), and a Focus on Language and Vocabulary section, which explains idioms and other phrases used by David Myers in the text that may not be clear to some readers.

This study guide for David Myers' best-selling text for introductory psychology courses is compelling and concise with a global perspective on psychology. This edition has been thoroughly updated, and includes new features and a media supplements package.

This briefer, streamlined version of Don and Sandra Hockenbury's acclaimed text, *Psychology*, Second Edition, warmly invites students to explore the science that speaks most directly to their everyday lives. With its smart pedagogy, attractive design and state-of-the-classroom media and supplements package, there is no text better equipped for introducing students to the science that speaks most directly to their everyday lives.

The Study Guide and Workbook provides a significant review and reinforcement tool to aid students in mastering their knowledge of the human skeleton, articulations, body motions, and the innervations and actions of individual and functional groups of muscles. Designed to accompany *An Illustrated Atlas of the Skeletal Muscles* 3rd edition by Bowden/Bowden as an additional study tool, it also provides all health professions and life science students an effective self-study guide on these topics.

The new edition of *Organizational Behavior* includes a rich array of exercises, cases, and applied materials such as the Kouzes and Posner Leadership Practices Inventory and Pfeiffer Annual Edition exercises available in the OB Skills Workbook. It also focuses more on the hot topic of ethics throughout the entire book to ensure it is contemporary and engaging. The text also introduces two brand new key features "Finding the Leader in You" and "Taking it Online". "Finding the Leader in You", discusses leading in the workplace in a personal and applied way. The goal is to make the material more relevant and applicable to today's readers. The "Taking it Online" feature will take the reader from the book to an online case, activity, self-assessment, or video clip of the leader they are reading about.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Study Guide for Human Information Processing is designed to accompany Lindsay and Norman's Human Information Processing (HIP). Problems and questions range from ones that are relatively easy to several that are somewhat difficult. This variation is intentional; the easy exercises explain and demonstrate the principles introduced in HIP, and the harder problems challenge students to apply those principles to new areas. Much of this study guide relies on the process of model building to review and expand on the principles in the text. Models will be proposed to explain experimental results. By using models the goal is to help students develop the ability to find truly significant patterns of results. This ability involves a critical attitude toward any experiment. For many of the models proposed, a joint search is conducted with students to discover the fatal flaws in the models. Students are also encouraged to propose models of their own, and to design experiments to test them
